

New Mobility RTU

Ingredients: Fractionated Coconut Oil, Essential Oils of Spruce (*Picea mariana*), Copaiba (*Copaifera officinalis*), Lavender (*Lavendula angustifolia*), Marjoram (*Origanum majorana*), Peppermint (*Mentha piperita*), Helichrysum (*H. italicum*), Balsam Fir (*Abies balsamea*), Lemongrass (*Cymbopogon flexuosus*), Frankincense (*Boswellia carterii*), Basil (*Ocimum basilicum*), Blue Cypress (*Callitris intratropica*)

New Mobility RTU (Ready To Use) combines essential oils that decrease inflammation, soothes and rebuilds muscles, strengthens tendons and ligaments, supports joint and bone health, and more!

Directions for Use:

Birds & Exotics: New Mobility RTU can be used topically in some situations. However, there are products that are more specific to these animals that should be used first. **CritterBoost**, **Feathered Plus NEAT**, **Aqua-Add**, and **Any-Itis RTU** would be several recommendations for these species, depending on their needs.

Cats: For most cats, we would recommend using the **KittyBoost** and not New Mobility RTU.

Dogs: This blend was created specifically with dogs in mind. An ideal blend, with every essential oil that I always wanted for dogs who had knee injuries, were healing from orthopedic procedures and repairs, or that were just stiff or sore from any cause. Whenever anyone would ask me "What oils would be good for..." - it would never fail that some of my absolute favorite oils were either too expensive, on back order, or just not in the home at that time.

- Apply New Mobility RTU with **Petting Techniques**. Place 1-10 drops into your hands, rub them together and massage into the locations of need. If your dog has had a surgery, please avoid applying within 1-2 inches of the incision. Applying around the incision area is all that is necessary, and is highly beneficial. Please use caution if surgical areas are irritated - such as with clipper burn or irritations from surgical scrub. New Mobility RTU is already diluted in Fractionated Coconut Oil, making it very convenient. This oil blend can be applied up to 3 times a day, or as needed.

Horses & Large Animals: These animals can also use the RTU blend, however, they may find more effect from the NEAT version discussed below, and diluted to the perfect concentration for their needs.

New Mobility NEAT

Ingredients: Essential Oils of Spruce (*Picea mariana*), Copaiba(*Copaifera officinalis*), Lavender (*Lavendula angustifolia*), Marjoram (*Origanum majorana*), Peppermint (*Mentha piperita*), Helichrysum (*H. italicum*), Balsam Fir (*Abies balsamea*), Lemongrass (*Cymbopogon flexuosus*), Frankincense (*Boswellia carterii*), Basil (*Ocimum basilicum*), Blue Cypress(*Callitris intratropica*)

An undiluted version of New Mobility, provides for the ability to custom dilute the blend for your particular animal needs. Occasionally, this blend is used NEAT to provide a bit more of a powerful application to horses and other larger animals.

To create your own diluted blend of New Mobility - I recommend using **Fractionated Coconut Oil (FCO)** available to order on our **Accessories** page. Other carrier oils can certainly be used, but FCO is my favorite. As a starting dilution - I would recommend adding 1 part New Mobility NEAT to 9 parts FCO. For example, 1 drop essential oil, to 9 drops Coconut Oil. Or - 10 drops of essential oil to 90 drops of Coconut Oil.

For an easier, larger recipe, you can add 1 mL of essential oil to 9 mL of Coconut Oil. This is best done in an empty 15 mL essential oil bottle - available **HERE**. Measuring out 1 mL of the essential oil can be hard, unless you are a nerd like me and have a glass graduated cylinder for measuring!

So - for those of you who need a more "rustic" version of measuring - (there are approximately 25 drops of New Mobility NEAT in 1 mL) - I recommend adding 25 drops of New Mobility NEAT to 2 teaspoons (10 mL) of Fractionated Coconut Oil. These measurements can vary slightly and not be too critical to be perfect, but it will give you an excellent start towards creating an approximate 10% concentration of New Mobility.

Once you have made this concentration, if you find that you need it to be a bit stronger, simply add several more drops of essential oil to your creation. Ideally, I rock the mixture once or twice a day to mix it completely, and allow it to sit for a couple of days to a week in order to fully "marry" with the Coconut Oil. If you have to use the diluted blend immediately, this is fine too. However, I find that the more time blends get to properly mix and "join together" the more synergy we see between the ingredients!

Horses & Large Animals: New Mobility NEAT (diluted or undiluted) is generally applied with **Petting Techniques**. Place 5-10 or more drops into your hands. Rub them together, then massage and pet onto the area of need. Indicated for all musculoskeletal conditions, Tying Up, sore backs, inflammation, bone and nerve conditions, laminitis, navicular disease, and more.

Dogs: Occasionally, there is a dog who may need a stronger application than the New Mobility RTU. In these cases, feel free to use the New Mobility NEAT.
